TOTAL SEAL. PISTON RINGS. NOTHING ELSE.

- **Stronger**...Survives The Most Extreme Conditions
- **Longer Life**...Less Wear
- **Most Precise Tolerances**...Not Possible With Other Materials
- **Thinner**...Less Friction, Less Weight
- **Flatter**...Better Sealing to Ring Lands
- **Lighter**...Less Mass for Higher RPMs, More Horsepower
- **Conforms Better to the Cylinder Wall**...Superior Sealing
- **More Face Coatings**...More Options for Varying Applications
- **Anti-Friction Side Coatings**...Promotes Ring Rotation, Prevents Micro-Welding
- **Custom Sizing**...What Do You Need?
- **Advanced Profiling**...Proprietary Machining Allows Us to Specialize Face Profiles
- **Advanced Profiling (AP) Steel Rings**...Available In Gapless® Or Conventional Styles

All of our Advanced Profiling™ Steel Rings are manufactured completely at Total Seal® in the most advanced steel ring production facility in North America.

of Piston Ring
Technology
from Total Seal®**

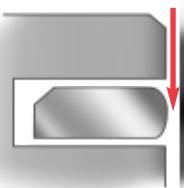

QUALITY. SELECTION. INNOVATION. SERVICE.

"I've been using Total Seal® rings in my engines for over 15 years. They've shown the most significant gains in power through improved cylinder sealing than any gains from cylinder heads or camshafts I've tried. Equally as important is the service and technical support I've received from their sales and tech staff." – Don Ott, Don Ott Racing Engines

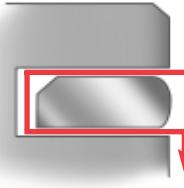

We thought this was an accurate quote that many people may question. The following briefly explains why and how piston rings have become such a vital part to your engine's performance and helps to explain why the above statement should be read again.

Piston Ring Function...Sealing for Horsepower.

There are three leak paths for blow-by to escape past the piston into the crankcase and we all know that *any* blow-by leaking past the piston is horsepower lost. Let's examine one path at a time...

THE FACE OF THE RING – The face of any compression ring can have many characteristics that may help or hinder cylinder sealing. The profile (barrel, taper..etc) can vary in many different ways that help the ring stay seated through piston rock over. Face coatings can also make a substantial difference with cylinder sealing depending on your cylinder wall material.

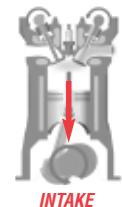

THE SIDES OF THE RING – The side surfaces of the ring, that is the surfaces that seat against the piston flank itself are often overlooked but equally as important in sealing an engine. Simply, the flatter and smoother these sides are, the better they will seal against the piston and stop any blow-by from traveling around the ring land and into the crankcase.

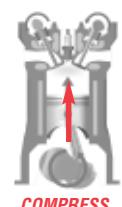

THE END GAP – Here is the correlation...the larger the end gap, the more blow-by and power reduction your engine will see.

Lets examine the strokes in a four stroke engine and the importance that cylinder sealing means to each...

INTAKE – On any naturally aspirated engine, the better the rings are sealed inside the cylinder and against the piston, the more intake charge (air and fuel) will fill the combustion chamber. Ring seal is the only thing in a normally aspirated engine that draws air / fuel into the cylinder.

COMPRESSION – The better the engine is sealed on the compression stroke, the higher the percentage of intake charge that previously filled the cylinder will be utilized. Ring seal is the only thing preventing the charge from leaking past the piston and into the crankcase.

POWER – During this explosive event, the more explosion the rings keep above the piston, the higher the force will be exerted downward on the piston, resulting in more torque and horsepower.

EXHAUST – The more efficiently the cylinder disposes of exhaust, the more that event in overlap, will help prime the intake stroke for cylinder filling.

SIMPLY STATED...AN INCREASE IN PISTON RING SEAL RESULTS IN HIGHER VOLUMETRIC EFFICIENCY WHICH EQUALS INCREASED TORQUE AND HORSEPOWER.

Total Seal® has worked hard trying to address each of the circumstances above. We have developed a number of separate ring lines from Gapless® to Diamond Finish™, all intended to improve the sealing of whatever engine you may have. Please look through our catalog, call and ask questions, and Total Seal will work with you to decide which ring set might be right for your situation.

HOW FAST DO YOU WANT TO GO?

TOTAL SEAL® Technology

AP ADVANCED PROFILING™ STEEL TOP RINGS (SEE INSIDE FRONT COVER)

DIAMOND FINISH™

The flattest, tightest tolerance piston rings available anywhere. Intended for hard core racing and currently in use at the highest levels of *STOCK CAR, DRAG* and *OPEN WHEEL COMPETITION*.

Top rings are produced to an axial tolerance of $+/- .000050"$ with a surface roughness of <4 microinches. Radial tolerance is held to $+/- .0005"$. Face coatings include plasma moly or state of the art proprietary PVD coatings.

Diamond Finish™ 2nd rings are produced to the same tight tolerances shown above and are available with a standard taper face or new sharp edge technology napier design. Combine the Diamond Finish™ top and second rings with our "special application" oil rings for the ultimate ring set.

GOLD FINISH™

New Total Seal® Gold Finish™ rings utilize tighter tolerances, sharp edge technology and PVD coatings for superior performance. Similar in design and technology to our Diamond Finish™ rings used by the top teams in racing, Gold Finish™ rings are more economical and were developed specifically for Saturday Night and Sportsman level racers.

TNT™ Top ring

This unique hybrid martensitic ductile iron ring is specifically engineered to withstand the rigors of extreme abuse such as in nitrous and forced induction applications. Optional aerospace face coatings make them easy on cylinder walls yielding long life in street or strip applications. Fully machined in house allows us to hold tight tolerances insuring a superior ring seal no matter what the application, so weather you're a professional racer or weekend warrior, the TNT™ Top ring has you covered.

Most popular sizes now available, custom sizes by request.

AEROSPACE STYLE COATINGS are one of the most significant advances in the performance engine building industry to come along in years. Total Seal® has done extensive research on which are best for use on a piston ring and its related surfaces. The following is a list our current coatings and their applications.

C-23™ is our pvd-applied face coating reducing friction and wear while offering better heat transfer and is compatible with most cylinder materials and cylinder coatings.

C-72™ is our pvd-applied face coating specifically engineered for hard-coated cylinders it offers the same performance gains as C-23™ with exceptional long term wear characteristics.

C-48™ is our pvd-applied face coating for those looking for the same characteristics as a moly filed ring but without the flaking problems commonly associated with moly.

D-47™ is our side coating used on the top and bottom ring flank offering exceptional ring to ring groove lubricity helping to eliminate micro welding. It is the standard side coating supplied with our Diamond Finish™ rings.

C-92™ is our PVD face coating reducing friction and wear available on Gold Finish™ ring sets.

Total Seals New coatings are available on **Diamond Finish™, TNT™, T-29™** and **Gold Finish™** top rings.

ASSEMBLY LUBRICANT

Specifically engineered by Total Seal® to provide proper ring lubrication during initial break in. AL4's clinging nature allows it to stay in place until the engine is placed in service. During initial start up it burns off quickly and cleanly leaving no residue. Used on it's own or combine it with Quickseat® for the most advanced piston and ring assembly lubrication available helping to assure fast and complete ring seating.

Total Seal® FAQ's

QUESTION:

Do Total Seal rings require special cylinder honing?

ANSWER:

No, Total Seal rings do not require special cylinder honing. But they like all piston rings do require proper cylinder honing. One of the most common causes of ring sealing issues today is improper cylinder honing. It's not uncommon to see engine blocks and cylinder sleeves ranging in hardness from approximately 150 to over 300 on the brinell scale. Yet it is very common to see these all of these being honed using the exact same process. The end results vary dramatically. These results are measured with a tool known as a surface roughness tester. The results are measured as Ra, Rz, Rpk, Rk, and Rvk and vary depending on the specific application. Basically these numbers are telling us to how rough the cylinder is and how well it can retain oil. An overly rough cylinder will prematurely wear the rings while an overly smooth cylinder may never seat the rings and can lead to cylinder burnishing. Cross hatch angles can also vary depending on the application. These angles determine the critical ring rotation speed, generally a 45° cross hatch angle will do a very good job. Though some O.E. applications do vary from this, if your not sure check before you proceed. To steep of a cross hatch angle can cause the rings to pump oil, rotate to quickly leading to accelerated ring and ring groove wear. To flat of a angle can cause a chattering affect as the ring passes over the valley preventing the ring from receiving proper lubrication again leading to excessive ring wear. If you're not sure about the proper honing procedures and cross hatch angle for your specific application please give us a call.

The following recommendations are for most general applications.

Ra	10-20 μ in.
Rz	10 times the Ra
Rk	30-50 μ in.
Rpk	5.0-20 μ in.
Rvk	50-100 μ in.

QUESTION:

What advantage does the gapless top ring offer over the gapless 2nd ring?

ANSWER:

The Total Seal gapless top ring is the natural evolution of the gapless second. By moving the gapless ring to the #1 ring groove we effectively seal the cylinder closer to the combustion chamber. This not only increases the cylinder seal on the compression and power strokes but also improves the ring seal on the intake stroke resulting in better cylinder filling on a normally aspirated engine. The increased amount of force generated by the combustion process in turn delivers a greater amount of energy to the crankshaft. The choice is yours and either ring offers superior cylinder sealing.

QUESTION:

Can I use a gapless top ring if my piston is gas ported?

ANSWER:

Yes, Gas porting aids in keeping any top ring seated in high rpm / high cylinder pressure applications.

QUESTION:

Can I break my engine in on synthetic oil?

ANSWER:

Though we have seen it done successfully on occasion we do not recommend it. We have seen the best and most consistent results breaking the engine in on light viscosity conventional oil. Synthetics can be used after completing the break process.

QUESTION:

What should I set my end gaps to?

ANSWER:

Please follow the gapping chart supplied with the ring set. Different applications require different amounts of gap. If for some reason the gapping chart is missing or your just not sure please call our tech line and they will gladly help you make the right choice.

QUESTION:

When file fitting the gapless ring do I need to file rail?

ANSWER:

Yes the ring and the rail need be filed*. Follow the gapping chart supplied with the ring set.

* The rail end gap can be larger than the primary ring but not smaller.

QUESTION:

Which way does the gapless ring go on the piston rail side up or down?

ANSWER:

The gapless ring is always installed rail side down.

QUESTION:

What is Quickseat?

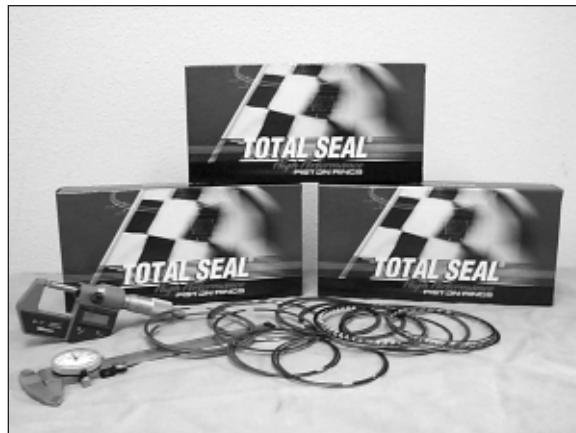

ANSWER:

Quickseat is our patented dry film cylinder wall assembly lube. It's quite unique in that it is a dry lube this helps to prevent glazing of the rings from the over use of assembly oil. It also provides outstanding lubrication during the critical initial start up period helping to prevent ring scuffing and cylinder wall burnishing.

NEW PRODUCT!

AP Advanced Profiling™ Steel Top Ring Sets

AP advanced profiling steel ring sets are custom manufactured in house to tight tolerances. This allows us to offer the strongest, lightest and most technologically advanced rings available. Combined with aerospace face coatings for low friction and reduced wear. AP advanced profiling steel rings are perfect for any application. Many popular sizes now available, custom sizes by request.

TOTAL SEAL®

High Performance
PISTON RINGS

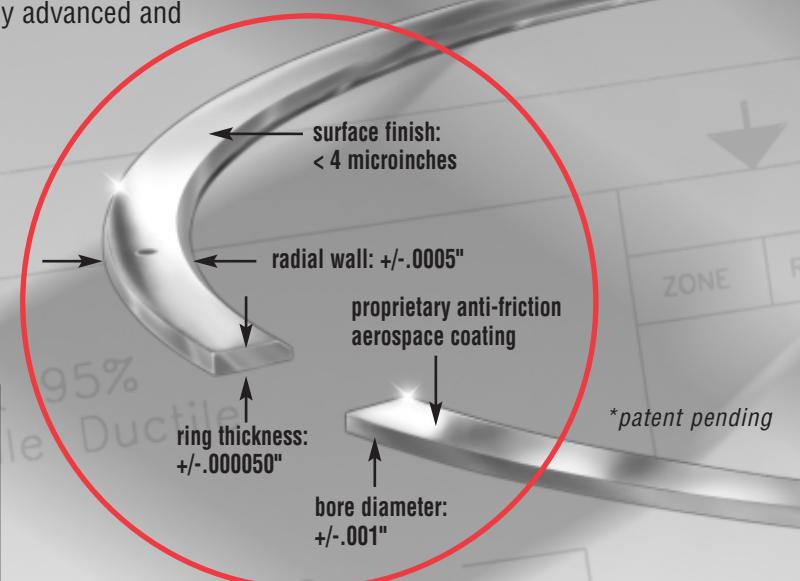

Diamond Finish™ Rings

Intended for hard core racing, Total Seal® **Diamond Finish™** rings are currently used in the highest levels of **STOCK CAR**, **DRAG** and **OPEN WHEEL COMPETITION**. Total Seal® is driven to manufacture the most technologically advanced and highest quality piston rings available.

- Tolerances of $+/- .000050"$
- Improved Sealing Between Piston and Piston Ring
- Optional PVD Coatings Engineered to Match Cylinder Material and Minimize Friction Losses
- Custom Axial Thickness Down to .6mm

Robert Yates Racing

Reher-Morrison Racing Engines

Rick Ellison

Dave Rampy
(Patterson Racing Engines)

J.J. Yeley

Don O'Neal Racing
(Pro Power Engines)

Take a look at these winners. Different forms of motorsports, one common formula. Every race winning engine was built using Total Seal® Piston Rings.

If you don't see it, call us,
WE CAN DO IT!

DIAMOND FINISH™ Anti-Friction Coated Top Rings

Total Seal's advanced manufacturing processes along with the use of aerospace materials and inspection allows use to produce piston rings with the flattest, tightest tolerances available anywhere. It's a winning formula, the flatter the ring lays against the piston ring flank the better it seals, the better it seals the more power your going to make.

Top rings are produced to a axial tolerance of $+\/- .000050"$ with a surface roughness of <4 microinches. Radial tolerance is held to $+\/- .0005"$. Face coatings include plasma moly or state of the art proprietary PVD coatings.

Diamond Finish™ 2nd rings are produced to the same tight tolerances shown above and are available with a standard taper face or new sharp edge technology napier design. Combine the Diamond Finish™ top and second rings with our "special application" oil rings for the ultimate ring set.

RING TYPE	DESCRIPTION
555	Torsional ductile iron plasma moly face
556	Torsional TNT ni-chrome plasma barrel face
558	Torsional TNT barrel face
560	Steel chrome barrel face
563	Steel moly barrel face
655	Torsional ductile iron plasma moly face Gapless

RING TYPE	DESCRIPTION
658	Torsional TNT barrel face Gapless
660	Steel chrome barrel face Gapless
757	Torsional TNT barrel face with optional face coatings
758	High tensile iron barrel face with optional coatings
760	Steel barrel face optional face coatings
NC	Non chromed rails for use in coated cylinders

**Diamond Finish™ Rings also available in Gapless® configuration.
CUSTOM SIZES AVAILABLE UPON REQUEST.**

If you don't see what you need give us a call. "We Can Do It" new sizes added daily!

All Diamond Finish™ rings include D-47™ side coating unless otherwise specified

Coatings:

C-23™ is our pvd-applied face coating reducing friction and wear while offering better heat transfer and is compatible with most cylinder materials and cylinder coatings.

C-72™ is our pvd-applied face coating specifically engineered for hard-coated cylinders it offers the same performance gains as C-23™ with exceptional long term wear characteristics.

C-48™ is our pvd-applied face coating for those looking for the same characteristics as a moly filed ring but without the flaking problems commonly associated with moly.

D-47™ is our side coating used on the top and bottom ring flank offering exceptional ring to ring groove lubricity helping to eliminate micro welding. It is the standard side coating supplied with our Diamond Finish™ rings.

C-92™ is our PVD face coating reducing friction and wear available on Gold Finish™ ring sets.

Total Seals New coatings are available on Diamond Finish™, TNT™, and T-29™ top rings.

**All DIAMOND FINISH™ Rings are Patent Pending
Products exclusively from
TOTAL SEAL® Piston Rings, Phoenix, Arizona**

Special Application Oil Rings

The following oil rings are designed for competition applications and are not intended for novice engine builders.

Description,

ULTRA LOW TENSION:

Tight tolerance rail end gaps i.e. .005-.010" in specified bore size, engine must of the dry sump configuration and be capable of maintaining a vacuum in the crankcase.

HIGH TENSION:

Nitrous and Supercharged applications where additional tension is required.

RAIL FACE COATINGS:

Chrome: For use in iron cylinders or sleeves.

None: No coating for use in coated cylinders i.e. Nikasil® or similar.

C-23™: For use in iron or coated cylinders lowest coefficient of friction face coating available on an oil ring rail.

Advantage Ring Kits Use in pistons with 5/64 5/64 3/16 D-wall ring grooves

NOW AVAILABLE WITH GAPLESS TOP RINGS!!!

The Advantage ring kits were developed with "Stock" class Drag and Circle track racers in mind. These kits are for use with pistons that by the rules are required to have a ring groove combination of 5/64 5/64 3/16. Through the innovative use of specially designed rings and spacers the "stock" class racer can take advantage of the narrow, light weight, low drag rings that the "Pro" classes have successfully been using for years. Rounding out the package is our special low-tension oil ring created with wet sump engines in mind. It's a commonly known fact that less parasitic loss equals more horsepower. One of the easiest ways to achieve this is through the use of Pro style rings. There are no special tools or machining required. Check the chart for your bore size, if you don't see it listed give us a call and we'll try to build one specifically for you. Don't delay get the Total Seal Advantage and start making some real power before your competition does.

Gold Finish™

Premium Piston Ring Sets

New Total Seal® **Gold Finish™** rings utilize tighter tolerances, sharp edge technology and PVD coatings for superior performance. Similar in design and technology to our Diamond Finish™ rings used by the top teams in racing, **Gold Finish™** rings are more economical and were developed specifically for *Saturday Night* and *Sportsman* level racers.

TOP RING

- P92 Powermax™
- Heat Treated Ductile Iron
- Barrel Faced
- C-92™ PVD Face Coating
- Lower Coefficient of Friction
- No Moly Flaking
- Parallel Lapped Sides $\pm .0002"$
- Fits SAE Piston Ring Grooves
- .043"-1/16"
- D-Wall or PRO Series
- Gapless® or Conventional

2ND RING

- Napier® 2nd Ring
- Sharp Edge Technology
- Less Parasitic Drag
- Improved Oil Control
- .043" x .140"
- 1/16" x .160"

OIL RING

- Custom Designed Expanders
- Oil Rails Coiled on Bore Size
- Controlled End Gap
- Superior Oil Control
- 3.0mm and 3/16"

TNT™ Rings

TNT™ Ring Sets feature our latest Hybrid ductile iron technology. The centrifugally spun, heat-treated ductile iron top ring is specifically designed to withstand the rigors of nitrous oxide and forced induction environments. They're quick seating, easy on the cylinder walls and available with our optional PVD coatings for further reductions in friction and increased wear ability. 2nd rings are cast iron torsional taper face. Oil rings are 3 piece flex vent design. ***TNT™ Rings are also available in Gapless®.***

- TNT™ Top Rings are Centrifugal Cast for Superior Grain Structure
- Engineered for Extreme Abuse such as Nitrous Oxide, Turbocharged and High Cylinder Pressure Applications
- Tighter Tolerances and PVD Coatings, Reducing Friction and Eliminating Moly Flake

TNT™ Top Rings

Our latest in Hybrid ductile iron ring technology. The centrifugally spun, heat-treated ductile iron top ring is specifically designed to withstand the rigors of nitrous oxide and forced induction environments. They're quick seating, easy on the cylinder walls and available with our optional PVD face coatings for further reductions in friction and increased wear ability.

Coatings:

C-23™ is our pvd-applied face coating reducing friction and wear while offering better heat transfer and is compatible with most cylinder materials and cylinder coatings.

C-72™ is our pvd-applied face coating specifically engineered for hard-coated cylinders it offers the same performance gains as C-23™ with exceptional long term wear characteristics.

C-48™ is our pvd-applied face coating for those looking for the same characteristics as a moly filed ring but without the flaking problems commonly associated with moly.

D-47™ is our side coating used on the top and bottom ring flank offering exceptional ring to ring groove lubricity helping to eliminate micro welding. It is the standard side coating supplied with our Diamond Finish™ rings.

C-92™ is our PVD face coating reducing friction and wear available on Gold Finish™ ring sets.

Total Seals New coatings are available on Diamond Finish™, TNT™, and T-29™ top rings.

If you don't see it, call us,
WE CAN DO IT!

Napier® 2nd Rings

These 2nd rings are designed using the latest in sharp edge technology. Their unique face profile and positive torsional twist combine to produce a highly effective oil scraper yet show dramatic reductions in friction.

Gapless® Piston Rings

Total Seal's patented Gapless® Piston rings provide increased performance through unmatched sealing of the cylinder and combustion gasses in the combustion chamber. Increased horsepower and torque along with longer engine life are just a couple of the reasons why Total Seal's Gapless® Piston rings are the best rings available. Here are many more.

- Increased horsepower and torque
- Longer engine life
- Saves money (fewer teardowns)
- Improved consistency
- Cleaner engine oil
- Longer ring life
- Better Oil control
- Less friction
- Lower engine oil temperatures
- Wider torque curve
- More engine vacuum
- Increased intake signal

How it Works...

As shown in the illustration, compression gas is deflected by the rail into the piston groove and aid in pressure loading the ring throughout the 4 stroke cycle. At the same time the rail also and most importantly closes off the combustion gas leak path created by the ring end gap. This gap is the primary cause of blow-by in a 4 cycle engine. With a conventional type ring as the ring and cylinder wear the ring end gap increases and the blow-by figures increase. The Gapless® ring blow-by figures are not affected by this wear, as the ring end gap increases it is blocked by the rail portion of Total Seals patented interlocking 2 piece design stopping the blow-by at the source. Conventional style rings when newly installed will show leak down figures of 7% or higher these figures can quickly exceed 20% or higher after a surprisingly short period of time. Gapless® rings on the other hand when newly installed typically show leak down figures of 2% and lower and will remain the same throughout the life of the engine.

The Total Seal® Advantage

Total Seal® is the leader in Piston Ring technology with the ability to meet whatever special needs you may have. From IMCA modifieds to Winston Cup and Irl, Total Seal® can fit rings to your piston.

We will go out of our way to help our customers, and will make custom sets (backcut, special tensions...etc) for any specific piston you may have.

**If you don't see it, call us,
WE CAN DO IT!**

Ring Installation

Proper preparation is essential to achieving optimum performance from your piston rings. It is imperative that all rings be checked dimensionally with the ring grooves and with the cylinder bore.

Remove any burrs from the piston and the piston ring, they should not have any, but check!

Using a squaring tool put the ring in the bore to be used and measure the ring gap to make certain it is correct for the bore size and application. When measuring the ring gap it is recommended that the ring be below the top of the block at least one inch to avoid any taper from bore recession

Gapless® Top Rings

Application	Min. Top Ring	Second Ring	Oil Ring Rail
Street, Strip, Circle	Bore x .0065"	Bore x .0056"	Min. .015"
Nitrous up to 150hp	Bore x .007"	Bore x .006"	Min. .015"
Nitrous over 150hp	Bore x .009"	Bore x .008"	Min. .015"

Blown Nitro*	Bore x .0055"	Bore x .0035"	Min. .015

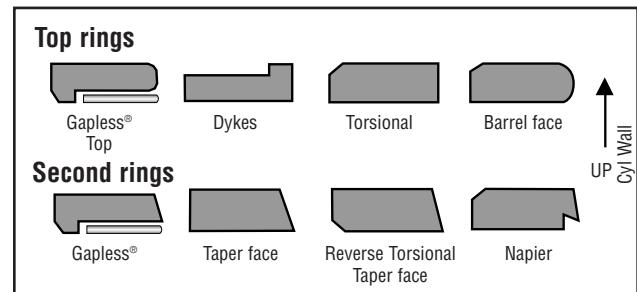

*Indicates any type of forced induction system.

HELPFUL TIPS FOR RING FITTING AND SEATING

All pistons (including new ones) should be checked for proper ring to groove clearances.

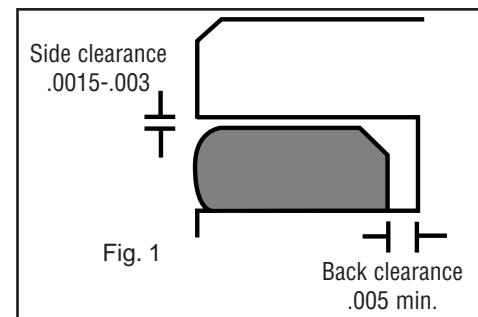

Ring to piston groove back clearance should be a MINIMUM of .005" deeper than radial wall dimension of piston ring. If piston ring sticks out of groove by any amount, you have the wrong rings (see fig. 1).

Ring to groove side clearance should be a minimum of .0015 to a maximum of .003" (see fig. 1).

Boring and Honing

Boring and Honing is becoming a very complicated subject as cylinder finishes become more refined and oils become more slippery. There are a number of different honing procedures depending upon ring material, ring tension, block material, and application. If you have any questions about how your cylinder should be honed, please contact us at 800-874-2753 so that we can learn more about your application and designate a specific honing procedure just for you.

Ring Seating

When first starting your engine to ensure proper ring seating, do not allow the engine to idle for long periods at a time. It is a good idea to mildly load the engine as soon as you can. Highway driving is a good way to properly seat the rings quickly. Do not idle the engine as idling does not break in any engine. Total Seal® DOES NOT recommend the use of synthetic oils during break-in. After 2000-3000 miles on the street, or one night racing on the track, the rings should be adequately seated so that any oil you prefer can then be used.

Valve Guides and Seals

Total Seal® recommends using a positive valve guide seal preferably made of viton on all applications. Proper valve stem to guide clearances must also be maintained.

Set Descriptions

Diamond Finish™

Top rings are produced to an axial tolerance of $+\text{-}.000050"$ with a surface roughness of <4 microinches. Radial tolerance is held to $+\text{-}.0005"$. Face coatings include plasma moly or state of the art proprietary PVD coatings.

Diamond Finish™ 2nd rings are produced to the same tight tolerances shown above and are available with a standard taper face or new sharp edge technology napier design.

See pages 10–16 for a complete listing of sizes, materials and available coatings

TNT™

These sets feature our latest in Hybrid ductile iron ring technology. The centrifugally spun, heat treated ductile iron top ring is specifically designed to withstand the rigors of nitrous oxide and forced induction environments. They're quick seating easy on the cylinder walls and available with our optional PVD face coatings for further reductions in friction and increased wear ability. These sets are available with conventional, **Gapless top** or **Gapless 2nd rings**. See pages 20–22 for the complete listing.

Gold Finish™

These sets feature the latest in ring technology. Heat treated ductile iron top rings with our flake proof C-92™ PVD face coating are produced to $+\text{-}.0002"$ parallel standard, this helps to improve the ring to ring groove seal reducing blow-by. Also included is our new sharp edge technology napier 2nd rings reducing drag and improving oil control over conventional designs. Our tight tolerance oil rings round out the package with their tight rail end gaps and custom designed expanders offering unparalleled oil control while at the same time reducing drag. Available with conventional or **Gapless top rings**. See page 19 for the complete listing.

Gapless® 2nd ring sets

(T) TS1 sets feature ductile iron conventional top rings, **Gapless 2nd rings**, 3 piece standard tension oil rings. *Application:* Street, race, mild nitrous, mild forced induction.

(TL) TS1 sets feature ductile iron conventional top rings, **Gapless 2nd rings**, 3 piece **low tension** oil rings. *Application:* Race.

(TG) TS1 sets feature ductile iron conventional top rings, **Gapless 2nd rings**, 3 piece **gold power low tension** oil rings. *Application:* Race.

(X) Xtreme sets for sport compact applications feature steel conventional top rings **Gapless 2nd rings** and standard tension 3 piece oil rings. *Application:* Street, race, nitrous, forced induction.

(S) TSS Street sets feature cast iron conventional top rings, **Gapless 2nd rings** and 3 piece standard tension oil rings. *Application:* Street, mild race no nitrous or forced induction 10.5-1 or lower compression.

(CL) Clamer sets feature cast iron conventional top rings, **Gapless 2nd rings** and **gold power low tension** oil rings. *Application:* Dirt track racing 11:1 or lower compression on race fuel.

Gapless® Top Ring sets

(M) Maxseal sets feature ductile iron **Gapless top rings**, conventional 2nd rings and 3 piece standard tension oil rings. *Application:* Street, race, mild nitrous, mild forced induction.

(ML) Maxseal sets feature ductile iron **Gapless top rings**, conventional 2nd rings and 3 piece **low tension** oil rings. *Application:* Race.

(MG) Maxseal sets feature ductile iron **Gapless top rings**, conventional 2nd rings and 3 piece **gold power low tension** oil rings. *Application:* Race.

(MX) Maxseal Xtreme sets for sport compact applications feature steel **Gapless top rings**, conventional 2nd rings and 3 piece standard tension oil rings. *Application:* Street, race, nitrous, forced induction.

Conventional sets

(CM) Classic Premium sets features our premium ductile plasma moly conventional top rings, conventional 2nd rings and standard tension oil rings. *Application:* Street, race, mild nitrous, mild forced induction.

(CML) Classic Premium sets features our premium ductile plasma moly conventional top rings, conventional 2nd rings and **low tension** oil rings. *Application:* Race.

(CMG) Classic Premium sets features our premium ductile plasma moly conventional top rings, conventional 2nd rings and **gold power low tension** oil rings. *Application:* Race.

(CR) Classic race sets feature our Moly Max® ductile plasma moly conventional top rings, conventional 2nd rings and standard tension oil rings. *Application:* Street, race, mild nitrous, mild forced induction.

(CRL) Classic race sets feature our Moly Max® ductile plasma moly conventional top rings, conventional 2nd rings and **low tension** oil rings. *Application:* Race.

(CRG) Classic race sets feature our Moly Max® ductile plasma moly conventional top rings, conventional 2nd rings and **gold power low tension** oil rings. *Application:* Race.

(C) Classic street sets feature conventional cast iron top rings, conventional 2nd rings and 3 piece standard tension oil rings. *Application:* Street, mild race 10.5-1 or lower compression.

Advantage sets

Are designed for use with 5/64 5/64 3/16 ring grooves in classes that require these sizes. Through the use of special sized groove spacers, narrow "pro series" style rings and low tension oil rings we can significantly reduce the amount ring drag in these applications. See page 18 for additional information and available bore sizes.

Custom sets: Available in a wide array of configurations and applications. If you don't see what your looking for call our Tech line @ 800.874.2753 and let us build what you need.

Low Tension oil rings offer an approximate 25% reduction in tension when compared to standard tension.

Gold Power low tension oil rings offer an approximate 40% reduction in tension when compared to standard tension.

If you don't see it, call us,
WE CAN DO IT!

Ring Sets by Bore Diameter – Aftermarket

Ring sets for performance applications typically using non-OE ring groove sizes.

Low tension oils not recommended for street use.

See page 26 for set descriptions.

Xtreme Sets (additional applications available)

Sport Compact Applications

Designed specifically for the punishment a high revving Sport Compact engine can dish out. These sets feature our T-29™ steel top rings and can handle anything from an all motor street car to a full on nitrous, turboed race application. These sets are available for stock and most popular aftermarket pistons. If you're not sure which set is best for you give us a call.

See page 26 for set descriptions.

Set Descriptions

Diamond Finish™

Top rings are produced to an axial tolerance of $+-0.000050"$ with a surface roughness of <4 microinches. Radial tolerance is held to $+-0.0005"$. Face coatings include plasma moly or state of the art proprietary PVD coatings.

Diamond Finish™ 2nd rings are produced to the same tight tolerances shown above and are available with a standard taper face or new sharp edge technology napier design.

See pages 10–16 for a complete listing of sizes, materials and available coatings

TNT™

These sets feature our latest in Hybrid ductile iron ring technology. The centrifugally spun, heat treated ductile iron top ring is specifically designed to withstand the rigors of nitrous oxide and forced induction environments. They're quick seating easy on the cylinder walls and available with our optional PVD face coatings for further reductions in friction and increased wear ability. These sets are available with conventional, **Gapless top** or **Gapless 2nd rings**. See pages 20–22 for the complete listing.

Gold Finish™

These sets feature the latest in ring technology. Heat treated ductile iron top rings with our flake proof C-92™ PVD face coating are produced to $+-0.0002"$ parallel standard, this helps to improve the ring to ring groove seal reducing blow-by. Also included is our new sharp edge technology napier 2nd rings reducing drag and improving oil control over conventional designs. Our tight tolerance oil rings round out the package with their tight rail end gaps and custom designed expanders offering unparalleled oil control while at the same time reducing drag. Available with conventional or **Gapless top rings**. See page 19 for the complete listing.

Gapless® 2nd ring sets

(T) TS1 sets feature ductile iron conventional top rings, **Gapless 2nd rings**, 3 piece standard tension oil rings. *Application:* Street, race, mild nitrous, mild forced induction.

(TL) TS1 sets feature ductile iron conventional top rings, **Gapless 2nd rings**, 3 piece **low tension** oil rings. *Application:* Race.

(TG) TS1 sets feature ductile iron conventional top rings, **Gapless 2nd rings**, 3 piece **gold power low tension** oil rings. *Application:* Race.

(X) Xtreme sets for sport compact applications feature steel conventional top rings **Gapless 2nd rings** and standard tension 3 piece oil rings. *Application:* Street, race, nitrous, forced induction.

(S) TSS Street sets feature cast iron conventional top rings, **Gapless 2nd rings** and 3 piece standard tension oil rings. *Application:* Street, mild race no nitrous or forced induction 10.5-1 or lower compression.

(CL) Clamer sets feature cast iron conventional top rings, **Gapless 2nd rings** and **gold power low tension** oil rings. *Application:* Dirt track racing 11:1 or lower compression on race fuel.

Gapless® Top Ring sets

(M) Maxseal sets feature ductile iron **Gapless top rings**, conventional 2nd rings and 3 piece standard tension oil rings. *Application:* Street, race, mild nitrous, mild forced induction.

(ML) Maxseal sets feature ductile iron **Gapless top rings**, conventional 2nd rings and 3 piece **low tension** oil rings. *Application:* Race.

(MG) Maxseal sets feature ductile iron **Gapless top rings**, conventional 2nd rings and 3 piece **gold power low tension** oil rings. *Application:* Race.

(MX) Maxseal Xtreme sets for sport compact applications feature steel **Gapless top rings**, conventional 2nd rings and 3 piece standard tension oil rings. *Application:* Street, race, nitrous, forced induction.

Conventional sets

(CM) Classic Premium sets features our premium ductile plasma moly conventional top rings, conventional 2nd rings and standard tension oil rings. *Application:* Street, race, mild nitrous, mild forced induction.

(CML) Classic Premium sets features our premium ductile plasma moly conventional top rings, conventional 2nd rings and **low tension** oil rings. *Application:* Race.

(CMG) Classic Premium sets features our premium ductile plasma moly conventional top rings, conventional 2nd rings and **gold power low tension** oil rings. *Application:* Race.

(CR) Classic race sets feature our Moly Max® ductile plasma moly conventional top rings, conventional 2nd rings and standard tension oil rings. *Application:* Street, race, mild nitrous, mild forced induction.

(CRL) Classic race sets feature our Moly Max® ductile plasma moly conventional top rings, conventional 2nd rings and **low tension** oil rings. *Application:* Race.

(CRG) Classic race sets feature our Moly Max® ductile plasma moly conventional top rings, conventional 2nd rings and **gold power low tension** oil rings. *Application:* Race.

(C) Classic street sets feature conventional cast iron top rings, conventional 2nd rings and 3 piece standard tension oil rings. *Application:* Street, mild race 10.5-1 or lower compression.

Advantage sets

Are designed for use with 5/64 5/64 3/16 ring grooves in classes that require these sizes. Through the use of special sized groove spacers, narrow "pro series" style rings and low tension oil rings we can significantly reduce the amount ring drag in these applications. See page 18 for additional information and available bore sizes.

Custom sets: Available in a wide array of configurations and applications. If you don't see what your looking for call our Tech line @ 800.874.2753 and let us build what you need.

Low Tension oil rings offer an approximate 25% reduction in tension when compared to standard tension.

Gold Power low tension oil rings offer an approximate 40% reduction in tension when compared to standard tension.

If you don't see it, call us,
WE CAN DO IT!

Ring Sets by Application – Original Equipment

Rings sets for OE and performance applications typically using OE ring groove sizes. Popular Aftermarket groove sizes also shown

See page 42 for set descriptions.

ADJUSTABLE RING COMPRESSOR

Total Seal's adjustable ring compressor features billet aluminum construction and are hard anodized for a longer life. They have a tapered face and will adjust from 2.700-2.800 to 4.575-4.700.

Hard Anodized & Thin walled to clear head studs.

NON ADJUSTABLE RING COMPRESSOR

Total Seal's non adjustable ring compressors are precision machined from heat treated aluminum and then hard anodized for years of use, for the builder who does a lot of repeat bore sizes. Available from 3.530" to 4.625" bore size. Part number = bore.

BAND STYLE RING COMPRESSOR

These wrap-around type compressors are for installing pistons in most makes and models of engines, even with head studs installed. Self-locking heavy duty ratchet pawl. Automatic friction brake with multiple tension band. Two sizes available 2-1/8" to 5" or super heavy duty model 3-1/2" - 7".

HAS1134	2-1/8" TO 5"
HAS1138	3-1/2" TO 7"

RING-O-MATIC RING COMPRESSOR

Quick change design speeds piston ring installation. Works on air cooled motors where the piston is slid in from the bottom. The Ring-O-Matic pliers and bands are designed to operate in all positions not just vertically or horizontally. Pliers incorporate precision locking action for exact holding and quick release. Comes with six sizes from 2-7/8" to 4-3/8". Larger sizes available.

HAS1670	RING-O-MATIC 2-7/8" TO 4-3/8"
----------------	--------------------------------------

POWER FILER

Fast and effective way to gap size all your rings. Simply clamp ring, set micrometer to desired removal amount, and grind away. Comes with a rechargeable battery, AC adapter, grinding wheels, all necessary tools, and instructions.

RF 7000 Power Filer

TOTAL SEAL'S PISTON RING FILER

This high quality hand operated ring filer is an essential for any engine builders tool box.

HAS 3272 STANDARD MODEL
HAS 3272A CARBIDE COATED
 REPLACEMENT WHEEL

PISTON RING EXPANDER

This deluxe piston ring expander will support the ring all the way around. This will help in not distorting the ring and cut down on breakage. This tool will save time and money. Available in three sizes for pistons from 2" to 7".

HAS1723 PISTON RING INSTALLER

DELUXE PISTON RING EXPANDER

This deluxe piston ring expander will support the ring all the way around. This will help in not distorting the ring and cut down on breakage. This tool will save time and money. Available in three sizes for pistons from 2" to 7".

HAS1258 1 1/4" to 2 1/4" rings
HAS1941 2 3/4" to 4 1/4" rings
HAS1936 4 1/2" to 7" rings

QUICKSEAT®

Dry film cylinder wall lubricant provides the proper lubrication during the critical break-in period. Virtually eliminating ring related cylinder wall burnishing and glazing.

QS Quickseat dry film powder - 2 grams
QS-14 Quickseat dry film powder - 14 grams

ASSEMBLY LUBRICANT

Specifically engineered by Total Seal® to provide proper ring lubrication during initial break in. AL4's clinging nature allows it to stay in place until the engine is placed in service. During initial start up it burns off quickly and cleanly leaving no residue. Used on its own or combine it with Quickseat® for the most advanced piston and ring assembly lubrication available helping to assure fast and complete ring seating.

AL4 4oz
AL4-12 Case of 12

NEW PRODUCT!

TOTAL SEAL® SERVICES

Modify 2 stroke piston to accept gapless ring.

Piston regrooving.

Ring back cutting.

Ring conversion to .017 or .031 dykes style

Custom axial sizing.

PREFIX LEGEND:

Gapless® top ring sets

- M Maxseal, street / race
- ML Maxseal, low tension, race
- MG Maxseal, gold power low tension, race
- MX Maxseal Xtreme, Sport compact, street / race
- MS Maxseal Steel top
- MSL Maxseal Steel top, low tension
- MSG Maxseal Steel top, gold power low tension
- MT TNT
- MTL TNT, low tension

Gapless® 2nd ring sets

- S Street
- CL Claimer (cast moly top ring)
- T TS1 Street / Race
- TL TS1 Race, low tension
- TG TS1 Race, gold power low tension
- TS TS1 Steel top
- TSL TS1 Steel top, low tension
- TSG TS1 Steel top, gold power low tension
- TT TNT
- TTL TNT, low tension
- X Xtreme, Sport compact, street / race

Conventional sets

- C Classic
- CR Classic Race
- CRL Classic Race, low tension
- CRG Classic Race, gold power low tension
- CM Classic Premium
- CML Classic Premium, low tension
- CNG Classic Race, gold power low tension
- CS Classic Steel top
- CSL Classic Steel top, low tension
- CSG Classic Steel top, gold power low tension
- CT TNT
- CTL TNT, low tension

If you don't see it, call us,
WE CAN DO IT!

PREFIX LEGEND:

Gapless® top ring sets

- M** Maxseal, street / race
- ML** Maxseal, low tension, race
- MG** Maxseal, gold power low tension, race
- MX** Maxseal Xtreme, Sport compact, street / race
- MS** Maxseal Steel top
- MSL** Maxseal Steel top, low tension
- MSG** Maxseal Steel top, gold power low tension
- TNT**
- MTL** TNT, low tension

Gapless® 2nd ring sets

- S** Street
- CL** Claimer (cast moly top ring)
- T** TS1 Street / Race
- TL** TS1 Race, low tension
- TG** TS1 Race, gold power low tension
- TS** TS1 Steel top
- TSL** TS1 Steel top, low tension
- TSG** TS1 Steel top, gold power low tension
- TT** TNT
- TTL** TNT, low tension
- X** Xtreme, Sport compact, street / race

Conventional sets

- C** Classic
- CR** Classic Race
- CRL** Classic Race, low tension
- CRG** Classic Race, gold power low tension
- CM** Classic Premium
- CML** Classic Premium, low tension
- CMG** Classic Race, gold power low tension
- CS** Classic Steel top
- CSL** Classic Steel top, low tension
- CSG** Classic Steel top, gold power low tension
- CT** TNT
- CTL** TNT, low tension

If you don't see it, call us,
WE CAN DO IT!

PREFIX LEGEND:

Gapless® top ring sets

- M** Maxseal, street / race
- ML** Maxseal, low tension, race
- MG** Maxseal, gold power low tension, race
- MX** Maxseal Xtreme, Sport compact, street / race
- MS** Maxseal Steel top
- MSL** Maxseal Steel top, low tension
- MSG** Maxseal Steel top, gold power low tension
- MT** TNT
- MTL** TNT, low tension

Gapless® 2nd ring sets

- S** Street
- CL** Claimer (cast moly top ring)
- T** Street / Race
- TL** TS1 Race, low tension
- TG** TS1 Race, gold power low tension
- TS** Steel top
- TSL** TS1 Steel top, low tension
- TSG** TS1 Steel top, gold power low tension
- TT** TNT
- TTL** TNT, low tension
- TX** Xtreme, Sport compact, street / race

Conventional sets

- C** Classic
- CR** Classic Race
- CRL** Classic Race, low tension
- CG** Classic Race, gold power low tension
- CM** Classic Premium
- CML** Classic Premium, low tension
- CNG** Classic Race, gold power low tension
- CS** Classic Steel top
- CSL** Classic Steel top, low tension
- CSG** Classic Steel top, gold power low tension
- CT** TNT
- CTL** TNT, low tension

PREFIX LEGEND:

Gapless® top ring sets

- M** Maxseal, street / race
- ML** Maxseal, low tension, race
- MG** Maxseal, gold power low tension, race
- MX** Maxseal Xtreme, Sport compact, street / race
- MS** Maxseal Steel top
- MSL** Maxseal Steel top, low tension
- MSG** Maxseal Steel top, gold power low tension
- MT** TNT
- MTL** TNT, low tension

Gapless® 2nd ring sets

- S** Street
- CL** Clamer (cast moly top ring)
- T** TS1 Street / Race
- TL** TS1 Race, low tension
- TG** TS1 Race, gold power low tension
- TS** TS1 Steel top
- TSL** TS1 Steel top, low tension
- TSG** TS1 Steel top, gold power low tension
- TT** TNT
- TTL** TNT, low tension
- X** Xtreme, Sport compact, street / race

Conventional sets

- C** Classic
- CR** Classic Race
- CRL** Classic Race, low tension
- CRG** Classic Race, gold power low tension
- CM** Classic Premium
- CML** Classic Premium, low tension
- CMG** Classic Race, gold power low tension
- CS** Classic Steel top
- CSL** Classic Steel top, low tension
- CGS** Classic Steel top, gold power low tension
- CT** TNT
- CTL** TNT, low tension

If you don't see it, call us,
WE CAN DO IT!

PREFIX LEGEND:

Gapless® top ring sets

- M Maxseal, street / race
- ML Maxseal, low tension, race
- MG Maxseal, gold power low tension, race
- MX Maxseal Xtreme, Sport compact, street / race
- MS Maxseal Steel top
- MSL Maxseal Steel top, low tension
- MSG Maxseal Steel top, gold power low tension
- MT TNT
- MTL TNT, low tension

Gapless® 2nd ring sets

- S Street
- CL Claimer (cast moly top ring)
- T Street / Race
- TL TS1 Race, low tension
- TG TS1 Race, gold power low tension
- TS TS1 Steel top
- TSL TS1 Steel top, low tension
- TSG TS1 Steel top, gold power low tension
- TT TNT
- TTL TNT, low tension
- X Xtreme, Sport compact, street / race

Conventional sets

- C Classic
- CR Classic Race
- CRL Classic Race, low tension
- CRG Classic Race, gold power low tension
- CM Classic Premium
- CML Classic Premium, low tension
- CNG Classic Race, gold power low tension
- CS Classic Steel top
- CSL Classic Steel top, low tension
- CSG Classic Steel top, gold power low tension
- CT TNT
- CTL TNT, low tension

PREFIX LEGEND:

Gapless® top ring sets

- M Maxseal, street / race
- ML Maxseal, low tension, race
- MG Maxseal, gold power low tension, race
- MX Maxseal Xtreme, Sport compact, street / race
- MS Maxseal Steel top
- MSL Maxseal Steel top, low tension
- MSG Maxseal Steel top, gold power low tension
- MT TNT
- MTL TNT, low tension

Gapless® 2nd ring sets

- S Street
- CL Claimer (cast moly top ring)
- T ST1 Street / Race
- TL TS1 Race, low tension
- TG TS1 Race, gold power low tension
- TS TS1 Steel top
- TSL TS1 Steel top, low tension
- TSG TS1 Steel top, gold power low tension
- TT TNT
- TTL TNT, low tension
- X Xtreme, Sport compact, street / race

Conventional sets

- C Classic
- CR Classic Race
- CRL Classic Race, low tension
- CRG Classic Race, gold power low tension
- CM Classic Premium
- CML Classic Premium, low tension
- CMG Classic Race, gold power low tension
- CS Classic Steel top
- CSL Classic Steel top, low tension
- CSG Classic Steel top, gold power low tension
- CT TNT
- CTL TNT, low tension

PREFIX LEGEND:

Gapless® top ring sets

- M** Maxseal, street / race
- ML** Maxseal, low tension, race
- MG** Maxseal, gold power low tension, race
- MX** Maxseal Xtreme, Sport compact, street / race
- MS** Maxseal Steel top
- MSL** Maxseal Steel top, low tension
- MSG** Maxseal Steel top, gold power low tension
- MT** TNT
- MTL** TNT, low tension

Gapless® 2nd ring sets

- S** Street
- CL** Claimer (cast moly top ring)
- T** TS1 Street / Race
- TL** TS1 Race, low tension
- TG** TS1 Race, gold power low tension
- TS** TS1 Steel top
- TSL** TS1 Steel top, low tension
- TSG** TS1 Steel top, gold power low tension
- TT** TNT
- TTL** TNT, low tension
- X** Xtreme, Sport compact, street / race

Conventional sets

- C** Classic
- CR** Classic Race
- CRL** Classic Race, low tension
- CRG** Classic Race, gold power low tension
- CM** Classic Premium
- CML** Classic Premium, low tension
- CMG** Classic Race, gold power low tension
- CS** Classic Steel top
- CSL** Classic Steel top, low tension
- CSG** Classic Steel top, gold power low tension
- CT** TNT
- CTL** TNT, low tension

PREFIX LEGEND:

Gapless® top ring sets

- M Maxseal, street / race
- ML Maxseal, low tension, race
- MG Maxseal, gold power low tension, race
- MX Maxseal Xtreme, Sport compact, street / race
- MS Maxseal Steel top
- MSL Maxseal Steel top, low tension
- MSG Maxseal Steel top, gold power low tension
- MT TNT
- MTL TNT, low tension

Gapless® 2nd ring sets

- S Street
- CL Claimer (cast moly top ring)
- T TS1 Street / Race
- TL TS1 Race, low tension
- TG TS1 Race, gold power low tension
- TS TS1 Steel top
- TSL TS1 Steel top, low tension
- TSG TS1 Steel top, gold power low tension
- TT TNT
- TTL TNT, low tension
- TX Xtreme, Sport compact, street / race

Conventional sets

- C Classic
- CR Classic Race
- CRL Classic Race, low tension
- CRG Classic Race, gold power low tension
- CM Classic Premium
- CML Classic Premium, low tension
- CMG Classic Race, gold power low tension
- CS Classic Steel top
- CSL Classic Steel top, low tension
- CSG Classic Steel top, gold power low tension
- CT TNT
- CTL TNT, low tension

WE CAN DO IT!

Terms and Conditions of Sale

SALES POLICY:

All orders will be priced according to our current price schedule. Due to the rising costs of labor and production we reserve the right to change prices without notification.

TERMS:

2% Discount on 10 days or Net 30 Days. 2% Discount allowed if paid in 10 days or less following the date on invoice. Open accounts are due and payable 30 days following the invoice date. Interest will be charged on all balances past due at the rate of 1.5% per month (18% APR). VISA, MASTERCARD and AMEX are accepted. No discounts are given on C.O.D. or Bank Card shipments. All custom made sets must be prepaid.

SALES TAX:

Non-refundable sales tax will be charged on all invoices to customers in Arizona that do not have a resale card on file with us at time of invoicing.

WARRANTY DISCLAIMER:

Total Seal®, Inc. products are warrantied to be free from defects in material and workmanship. It is the responsibility of the purchaser to inspect all the goods carefully before use. Any returns are to be made before the product is used. Credit, repair, or replacement of goods is predicated upon factory inspection of the product in question.

Due to the nature of high performance applications, the parts in this catalog are sold without any expressed or implied warranty of merchantability or fitness for a particular purpose. Total Seal® shall not, under any circumstances, be liable for any special, consequential or incidental damages, including but not limited to loss of profits or revenue, loss of other property or equipment, cost of purchased or replacement of goods, or claims of customers of the purchaser, which may arise and/or result from the sale, installation or use of these parts.

Installation of these parts could adversely affect the vehicle manufacturer's warranty coverage. Subject to applicable state law. Some items may not be legal for use in CA on pollution controlled vehicles.

RETURNED GOODS:

All sales are final. No refunds will be made. All corrections will be handled by credits to your account or exchanges. Credits or exchanges will be subject to a 15% handling charge and must be completed within 45 days of purchase, or they will be considered invalid.

No returned merchandise will be accepted without prior authorization. Any request to return unused goods must be made within 30 days of purchase date.

All returning goods must be accompanied with an RGA# and a copy of the invoice and must be shipped with freight prepaid.

No returns will be allowed on custom orders.

Annual Return Policy: 2% of annual sales. RGA is required in advance.

Stock Adjustments: New customers are allowed a one time **100%** stock adjustment of original stock order within the first year. Returned inventory must be accompanied by an equal to or greater than off setting order. **RGA is required in advance.**

CUSTOMER GOODS:

Pistons, rings, and other customer goods sent in to Total Seal® for modification are accepted at customer's risk. Reasonable care will be taken; however, Total Seal® will not be responsible for modifications correctly accomplished to the customer's specifications or other related losses.

SHIPPING:

All orders will be shipped by the fastest, most economical way unless otherwise specified. All shipments are F.O.B. Phoenix, Arizona.

When necessary we are able to drop-ship orders. The Total Seal® fee for this service is \$5.00 per shipment. All orders are charged a \$4.25 packaging/handling fee. All orders requiring special handling, i.e. must go a.s.a.p., will receive a \$25.00 fast charge.

Total Seal® reserves the right to make changes in design, specifications, materials, or make product changes without incurring liability or obligation with respect to similar product previously manufactured.

DISTRIBUTION INFORMATION:

General Notes:

Pro-Jobber Qualification:

A new customer with an established automotive business may purchase piston rings at the "Pro-Jobber" price which is 10% below the Racer price. Pro-Jobbers (P) may convert to Jobber status by completing their \$2,500.00 "Buy in" over a two month period. Pro-Jobbers do not receive referrals, regular mailing, new catalogs, etc., automatically. Established Jobbers (J) and Warehouse Distributors (WD) are on our mailing list and automatically receive newsletters, updates, new product notices, advance price change notices, etc. In addition, referrals from written and phone inquiries are made only to established customers. Co-op advertising, special programs and promotions, etc., are available only to established WDs.

Jobber Qualification:

A \$2,500.00 initial order and a 2 set per month minimum is required to maintain Jobber status.

Warehouse Distributors Qualification:

A \$7,500.00 initial order and a 10 set per month minimum is required to maintain Warehouse Distributors status.
