

## **Lithium-ion Battery Pack**

### **CHARGING INSTRUCTIONS:**

1. Plug charger power cable into wall power. (100-240VAC~)
2. Connect the charger to the battery pack.
3. 'CHARGING' lights will light up in a flowing pattern signaling that a charge is in process.
4. A 100% charge is not required, reference the digital display on the battery pack for % level, it is ok to stop the charging routine in the 90-100% area and still have maximum power.
5. Disconnect charger from the battery pack before disconnecting main power to the charger.

### **CHARGING ISSUES:**

1. If the CHARGING lights are all flashing at once, check all contacts for secure connections.
2. If the CHARGING lights are not flowing or flashing, check all contacts for secure connections.
